

SS.7.C.2.12

Develop a plan to resolve a state or local problem by researching public policy alternatives, identifying appropriate government agencies to address the issue, and determining a course of action.

No specific notes. This standard uses your accumulated knowledge to consider a realistic scenario. Example: A city is deciding whether to switch to a private company for garbage collection. Consider the chart and decide a good argument in favor of continuing the current city-service collection.

City collection:

- cans are 10 years old
- average monthly bill = \$30
- 5 full time employees
- does not offer recycling yet

Private company:

- will bring new cans
- average bill = \$32
- recycling will cost an extra \$7 per month
- will use 7 full time employees
